Needs Work

Audit date: 2026-06-19

Claude Skill and Plugin by Alex Labat

Executive Summary

OddsCheck-next is a technically accomplished Next.js build with a CMS-driven metadata system and rich, conditionally-constructed structured data (Organization, WebSite with SearchAction, CollectionPage/ItemList, BreadcrumbList, SportsEvent and NewsArticle) that is better engineered than most live production sites. The previously fatal sitewide crawl block has now been lifted: robots.txt serves "User-agent: *" with no Disallow plus a Sitemap line, so search and AI crawlers can reach the whole domain — this single change unlocks the strong foundation that was already in place. The remaining drag is content rather than engineering: the news feed is still lorem-ipsum, and the About and Contact pages are static placeholder components with no real company information. The highest-impact next steps are to replace that placeholder content, build out real author E-E-A-T, and layer FAQPage/HowTo schema onto the already snippet-ready guides.

Dimension	Score	Status	Key Takeaway
SEO	7/10	On Track	Crawl block lifted — strong technical foundation now indexable; held back mainly by placeholder content.
GEO	6/10	On Track	Entity schema strong and AI crawlers now unblocked; E-E-A-T still thin.
AEO	5/10	Needs Work	Snippet-ready guide content, now crawlable — but still no FAQ/HowTo schema.
Combined	18/30		

Pages Audited

Page	Type	Notes
/	Homepage	Rich content (~2k words), full Organization + WebSite JSON-LD, SearchAction. Strong.
/robots.txt	Crawl directive	RESOLVED: now 'User-agent: *' with no Disallow + Sitemap line. Full crawl access restored.
/sitemap.xml	Sitemap index	Well-structured index of 10 segmented sitemaps with lastmod. Good.
/about	Company	Placeholder component (~150 words). 'Static placeholder' note in build. No real bio.
/contact	Contact	Placeholder component. No NAP (name/address/phone) data exposed.
/news	Blog index	Lorem-ipsum article titles; author + date shown. 10 dummy articles, paginated.
/experts	Authors/E-E-A-T	Thin directory: names + job titles only, no real bios, credentials or photos.
/guides	Guides hub	24 guides, 6 categories, question-phrased headings. Title tag present. Strong.
/guide/[slug]	Topic guide	Excellent concise, question-led content — but NO JSON-LD schema at all.
/article/[slug]	Article detail	NewsArticle + BreadcrumbList schema with author/publisher. Good.
/football + sports	Sport listings	CollectionPage + BreadcrumbList + SportsEvent JSON-LD. CMS-driven meta.
/tools, /offers, /live	Utility pages	Present and linked; sitemap-listed. Content depth varies.

SEO Analysis — 7/10

Technical On-Page

Signal	Finding	Status
Title tag	CMS-driven via layout template '%s siteTitle'; per-page absolute titles on articles, guides and sports.	Good
Meta description	Article/guide descriptions present. Sport listings set description:null (no fallback); homepage description inherits CMS /settings, which may be empty.	Needs Attention
Canonical tag	Self-referencing canonical on every route via alternates.canonical resolved against metadataBase.	Good
Robots / indexability	robots.txt now serves 'User-agent: *' with no Disallow plus a Sitemap line — full crawl access restored (previously blocked the whole site with Disallow:/). Indexable.	Good
Viewport / mobile	Viewport configured with themeColor; responsive layout throughout.	Good
Heading hierarchy	Single H1 per page with logical H2/H3. (Experts H1 is a long sentence — minor refinement.)	Good
Open Graph	og:type, title, siteName and images emitted from CMS; article pages add OG images.	Good
Twitter Card	summary_large_image with handle pulled from CMS social links.	Good
Image alt text	Article hero alt = alt_text headline (good); decorative thumbnails use alt="". Depends on CMS images supplying alt text — verify.	Needs Attention
URL structure	Clean, readable, keyword-relevant (/football, /guide/value-bets, /article/[slug]).	Good
XML sitemap	Sitemap index of 10 segmented sitemaps with lastmod timestamps, referenced from robots.txt and now reachable.	Good

Content Quality

Signal	Finding	Status
Content depth	Homepage rich (~2k words); guides solid. But news is lorem-ipsum and About/Contact are placeholders.	Needs Attention
Keyword signals	Strong topical coverage on guides and sport pages; homepage establishes the betting-comparison theme clearly.	Good
Freshness signals	Article datePublished/dateModified in schema; visible 'Updated X ago' timestamps.	Good
Readability	Scannable: subheadings, short paragraphs, on-page table-of-contents on guides.	Good

Structured Data

Signal	Finding	Status
Organization + WebSite	Site-wide @graph with Organization (@id, url, logo, sameAs, contactPoint) and WebSite with SearchAction.	Good

Signal	Finding	Status
CollectionPage / ItemList	Sport listings and article lists emit CollectionPage with ItemList of typed items.	Good
BreadcrumbList	Present on article and sport surfaces.	Good
NewsArticle	Article detail emits NewsArticle with author (Person) and publisher (Organization + logo).	Good
Schema validity	Built conditionally — empty/unknown fields are omitted rather than emitted blank. Clean.	Good

GEO Analysis — 6/10

E-E-A-T Assessment

Signal	Finding	Status
Author information	Articles show authorName + optional bio; /experts exists but is thin (job titles only — no real bios, credentials or photos).	Needs Attention
About page	Static placeholder (~150 words) with a build note to port the original about.html. No real company background.	Missing
Contact information	/contact is a placeholder; Organization contactPoint only renders if the CMS supplies email/phone.	Needs Attention
Trust signals	Strong, niche-appropriate responsible-gambling signals (18+, BeGambleAware, GamCare, GAMSTOP). No awards/press/testimonials.	Needs Attention
Organization entity	Brand declared cleanly with @id, url, logo and sameAs (from CMS social links).	Good

Content for AI Synthesis

Signal	Finding	Status
Factual density	Guides carry concrete formulas, worked examples and numbers (e.g. implied-probability maths); homepage cites stats (120+ books, 14.7% value).	Good
Clear claims	Value propositions and definitions stated plainly at the top of pages.	Good
Source citation	Guides reference no external authorities or data sources AI engines could corroborate.	Needs Attention
Comprehensiveness	Guides are concise and correct but short; news content is placeholder.	Needs Attention
Entity clarity	Brand named consistently as OddsCheck.com across pages and schema.	Good

Technical GEO

Signal	Finding	Status
Structured-data depth	Rich core types, but no Author/Dataset/ClaimReview/SpeakableSpecification to deepen entity signals.	Needs Attention

Signal	Finding	Status
HTTPS / security	Served over HTTPS.	Good
AI crawlability	robots.txt no longer blocks crawlers — GPTBot, PerplexityBot, Google-Extended and others can now reach the site.	Good
sameAs / brand links	Social profile links emitted as sameAs from CMS social_links.	Good

AEO Analysis — 5/10

Featured Snippet Eligibility

Signal	Finding	Status
Direct-answer paragraphs	Guides answer the question in a concise paragraph directly under a question heading — ideal snippet shape.	Good
Definition patterns	Clear 'X is...' definitions ('Implied probability is the percentage chance...', 'A value bet is one where...').	Good
List content	Some bulleted content, but few explicit numbered step lists ready to become list snippets.	Needs Attention
Table content	Comparison tables are not prominent in guide content.	Needs Attention

Structured Answer Formats

Signal	Finding	Status
FAQ schema	No FAQPage markup anywhere, despite question-phrased headings throughout the guides.	Missing
HowTo schema	'How to calculate it' / 'How accumulators work' are ideal HowTo candidates — none are marked up.	Missing
Question-phrased headings	Guides use natural question language consistently.	Good
Speakable schema	No SpeakableSpecification for voice-friendly sections.	Missing

Voice Search Readiness

Signal	Finding	Status
Conversational language	Guides are written in a natural, conversational tone.	Good
Long-tail coverage	Guides address specific what/how/why questions a voice query would phrase.	Good
Local signals (NAP)	No local-business signals; contact page is a placeholder. Likely N/A for this model, but note no LocalBusiness schema.	Needs Attention

Priority Recommendations

Priority	Issue	Dimension	Effort	Impact
Critical	Replace placeholder content: lorem-ipsum news feed, placeholder About and Contact pages. Publish real, substantive content.	SEO / GEO	High	High
High	Add FAQPage + HowTo JSON-LD to /guide and /guide/[slug]. Content is already question-led and snippet-shaped.	AEO	Medium	High
High	Build real author bios, credentials and photos on /experts, plus consistent bylines, to establish E-E-A-T.	GEO	Medium	High
Medium	Ensure the CMS supplies meta descriptions for sport listing pages (currently description:null — they inherit nothing).	SEO	Low	Medium
Medium	Populate Organization contactPoint/address and sameAs via the CMS so the entity graph is complete.	GEO	Low	Medium
Quick Win	Confirm og:image (CMS site_og_image) renders on sport and guide pages for richer social/AI cards.	SEO	Low	Medium
Quick Win	Audit CMS-supplied article/feed images for descriptive alt text.	SEO	Low	Low

What's Working Well

CMS-driven metadata architecture	metadataBase, self-referencing canonical, Open Graph and Twitter cards built from /settings with no hardcoded brand strings — fields are omitted when absent rather than faked.
Comprehensive structured data	Organization + WebSite with SearchAction site-wide; CollectionPage/ItemList, BreadcrumbList, SportsEvent and NewsArticle (with author + publisher) on the relevant surfaces.
Clean information architecture	Readable, keyword-relevant URLs and a segmented sitemap index with lastmod timestamps.
Niche-appropriate trust signals	Prominent 18+ and responsible-gambling links (BeGambleAware, GamCare, GAMSTOP) — exactly what this vertical needs for trust.
Snippet-ready guide content	Guides lead with question-phrased headings and concise definitions/answers — one schema layer away from strong AEO performance.
Accessibility foundations	Skip-to-content link, semantic <main>/<nav>, aria labels and decorative-image handling are in place.

Scope & Limitations

Some signals can't be assessed from HTML/source alone: Core Web Vitals and real page-speed (run pagespeed.web.dev), actual mobile rendering, how AI crawlers handle JS-rendered content, and the backlink profile / domain authority. Note also that this is a Vercel preview deployment still populated with some placeholder data. The earlier sitewide robots block flagged in the first pass of this audit has since been lifted (robots.txt now allows all crawlers), and the scores in this report reflect that fix.

Glossary

SEO — Search Engine Optimization

Optimizing a site so traditional search engines (Google, Bing) can crawl, understand and rank its pages: titles, meta, headings, internal links, structured data and content quality.

GEO — Generative Engine Optimization

Optimizing for AI answer engines (ChatGPT Search, Perplexity, Google AI Overviews, Gemini) that synthesize and cite sources. Rewards clear authority (E-E-A-T), factual density, clean crawlability and a well-defined brand entity.

AEO — Answer Engine Optimization

Optimizing for featured snippets, 'People Also Ask' and voice search by giving direct, concise answers under question-phrased headings and marking them up with FAQ/HowTo schema.
